Tashkent, Uzbekistan

In the modern world, the winner is the one who has great knowledge. In order to know something, you need to learn. Now it is clear why so many people are trying to learn something new in order to keep up with the evolution. If you belong to this category of people who still want to learn, then you probably know what online lessons are.

What is e-learning? E-learning (from English Electronic Learning, or simply e-Learning) is a system of learning using the Internet and electronic technologies. The bottom line is that the student uses gadgets to study and gain knowledge.

This type of lesson allows you to save time during training and achieve results at the same time. Now there are huge opportunities to choose a suitable form of education for a child in parallel with school or outside of school: to study with tutors, family teachers, independently, with the help of parents, to use online resources. Like any other method, e-learning has its pros and cons. The advantages of online lessons are just to save time and money, but how is it with knowledge? Knowledge can be obtained only when you really want to learn and know something. Those who teach for show will never know anything. You need to teach for yourself and for a specific purpose, which is revealed by practical use

### **Advantages of online lessons:**

- Online lessons are a great solution for all adults who want to learn. In general, for all those who have many other serious responsibilities besides studying. The ability to create a flexible and convenient schedule of classes. You do not need to be tied to the set hours — if a student studies via the Internet, he plans the schedule independently. It is easy to combine with additional sections and circles — for example, you do not have to sacrifice a morning workout in the pool for the sake of sitting at a desk.
- Savings. Even if sometimes online lessons are paid, they are still cheaper. If traditional education requires buying office supplies, school uniforms, textbooks, workbooks, flowers for teachers, and a satchel, and in addition regularly discounts for the needs of the class and the parent committee, then e-learning does not provide for any of these expenses. All textbooks and manuals are digital, and you can study even in your pajamas. This also saves time and effort, which is usually spent on the road to get to a regular tutor.
- The training is interesting and allows the use of a variety of media material, due to which the assimilation of the material is better. Learn what interests you! A great advantage of e-learning is the ability to adapt the curriculum to individual ambitions and requests. A student wants to enter the Moscow State University mekhmat? No problem — the program focuses on physics and mathematics. Are students interested in the humanities? You throw your strength into languages, history, and law.
- Exclusion of personal contact with the teacher and with other students, which in some cases will help to get rid of psychological discomfort.
- Freedom of access. Another advantage of e — learning is that it is not tied to a specific location. It doesn't matter where the student is — in Europe, Asia, the United States or New Zealand. All you need for training is a computer or tablet with Internet access. Thanks to e-learning, knowledge is obtained from anywhere in the world, and this makes education accessible

### Disadvantages of online lessons:

- Adaptation. It is not always easy to adjust to a new way. It will take some time to get used to the new study mode. Everything will be different — you do not need to wake up early, get dressed and go somewhere for the first lesson. But there will be new responsibilities—to connect to the webinar on time or to do homework on the site before the deadline. *The solution* is to choose a platform where mentors will help you adapt.
- Lack of influence of the teacher on the student, due to which control is lost and often the effectiveness of classes is lost. Lack of live communication. If a student is an extrovert and studies online, he may not be able to communicate with his peers, because all his studies take place on the computer. Correspondence in the chat and social networks is also not always enough. *The solution* is to compensate for the lack of communication by visiting sections, clubs, traveling and excursions.
- Mental discomfort and deterioration in the assimilation of the material due to the lack of physical interaction. The teacher's facial expressions and gestures, as well as his voice, are also used to memorize the material.
- The need for high-quality Internet connection, so that the lesson is not interrupted and brings maximum benefit and efficiency. Unpreparedness of students Electronic learning is carried out via the Internet — which means that you need to be a fairly confident computer user. Part of the population is deprived of the opportunity to learn online-e-education seems to be a terrible and incomprehensible beast. *The solution* is to find a platform with a friendly and intuitive interface.
- Lack of personnel. Another disadvantage of e-education is the lack of competent specialists who can teach online. E-learning and face-to-face learning are very different. The teacher should be able to convey information through the computer screen so that it is bright, clear and interesting. *The solution* is to choose online courses with proven teachers who have been working remotely for a long time and are familiar with the features of e-education.
