

FAMILY, NEIGHBORHOOD AND COLLEGE SPIRITUAL - EDUCATIONAL COOPERATION STATUS OF SOCIAL PEDAGOGICAL RESOURCES

Abirova Umida Nazarovna

Teacher of Tashkent State Pedagogical University named after Nizami,
Researcher of the Republican Center for Spirituality and Enlightenment.

Annotation

The article provides technologies and recommendations for improving the social partnership of the family, community and educational institution in educating young people in Uzbekistan.

Key words:

Youth, education, upbringing, family, neighborhood, social, spirituality, enlightenment.

Today's rapidly globalizing world places a number of demands and responsibilities on families, communities and educational institutions in the upbringing of a harmoniously developed generation. In Uzbekistan the family, the community and the interests of improving cooperation between educational institutions, first and foremost priority levels, the protection of the rights issue is one of its purposes. For this reason, various symbols, local symbols, the country's youth to become mature human families directly and indirectly responsible. However, "Education of youth in families, neighborhoods and educational institutions, targeted ideological and educational work with unorganized youth in remote areas and neighborhoods, misguidance of crime, religious extremism and terrorism, disregard for national values, early marriage, family divorce. The fact that advocacy efforts to prevent such incidents are often ineffective requires serious attention to these issues." [1].

At the same time, President of Republic of Uzbekistan Shavkat Mirziyoyev said that the issue of crime among young people is one of the priorities, in particular, in the first 10 months of 2017, 22,000 young people committed crimes.

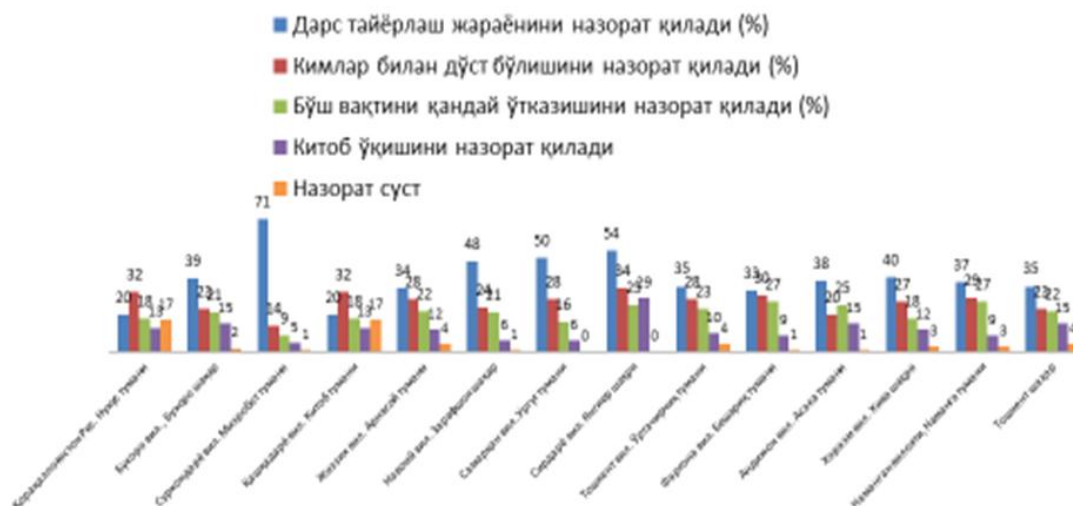

Although the implementation of the Resolution of the Cabinet of Ministers No. 371 has been implemented in practice, why the attendance rate in educational institutions is still low. Students do not attend classes for no reason and on a regular basis. This is caused by Decree No. 371, 175 discipline, fair play of the failure is detected. Vocational college teachers attached to the students' homes, local citizens' assemblies themselves, the students in special notebooks run by melted away. As a result, the students themselves stamp and sign the notebook. This is the discipline to play in the provision of timely accurate disclosure, during the low cooperation of family, community and educational institutions in the negative gaps in the country.

- The plan of parent meetings in professional colleges has not been developed and approved by the decision of the pedagogical council. Parents, parents do not plan on the basis of the meeting.
- educational institutions and a half year of the end of the semester, parents' meetings organized group of thirty students 15-20 show the parents come. They are also the parents of excellent, well-educated, well-educated students. Children with low self-esteem, difficult upbringing, and unhealthy families do not attend parent-teacher meetings.
- The issue of employment of graduates of professional colleges is one of the priorities of cooperation between the family, community and educational institution. Today, students in educational institutions of their own experts' whistles of full employment is ensured. The reason is the lack of vacancies in organizations in the specialties for graduates of professional colleges. As a result, graduates no professional work in jobs being. In some cases, unemployed youth are forced to go abroad in search of work.

The study of 1,573 families surveyed provided an opportunity to assess the status of aspects that need to be monitored by parents in child rearing. Statistical analysis by regions showed that parents consider it their primary responsibility to monitor the preparation of adolescents for their children (table). At the same time, the children of friends who are in that space, how you spend your time and attention to the interests of the readers is not enough.

Table. Aspects that need to be controlled by parents in child rearing.

The fourth direction of the work under the Five Important Initiatives in our country is directly aimed at improving the culture of reading among young people. This requirement, in turn, imposes several requirements and responsibilities on the family, community and educational institutions in the upbringing of a harmoniously developed generation. However, due to the lack of scientific and pedagogical support in this area, certain shortcomings were observed in this regard. In particular, the average number of apartments with a family library is 37%. The remaining 63% of households did not have or did not meet the requirements of family libraries (Table 2).

Table 2. Status of availability of family libraries in apartments.

Uzbekistan and opportunities created by the decrees, decisions and measures aimed at improving the industry, in spite of family, community and educational institutions to attract teenagers to various circles of the shortcomings that were observed to be available in cooperation with each other. Studies have shown that 56% of students are involved in clubs and extracurricular activities, and 44% have low social pedagogical effectiveness in the rational organization of leisure time (Table 3).

From the point of view of our research, the three- component measurement system for measuring the criteria, indicators, levels and qualities of national education of students, developed by Doctor of Pedagogical Sciences, Professor M. Kuronov, is of particular importance. The approach based on the practical unity of scientific and folk pedagogy in the harmonious formation of patriotism, national pride, culture of interethnic communication, conscience, national etiquette and national ideological consciousness of Uzbekistan are qualities that are directly and indirectly related to the national feeling of the developing person.[2].

The gender nature of spiritual education is also reflected in Islamic enlightenment. This was reported by the chairman of the Muslim Board of Uzbekistan, Mufti Usmonkhon Alimov. "Women should dress modestly and behave well. This shows that if Uzbek girls dress, behave and develop moral values on the basis of national upbringing, they will not be subjected to "mass culture" attacks from the West. "[3].

In order to expand the social partnership of public organizations in the upbringing of a healthy and harmoniously developed generation, to create and implement an effective mechanism for systematic study of the socio-spiritual status of families and to constantly study the real living conditions of the population. it is necessary to develop a program of measures to eliminate them. In this regard, community, family, child education Yasin's ma s ' al intentions, family values, strengthening the role of the family in maintaining peace and stability in the society and the institution of the family to improve the educational status of scientific and methodological advice enabled the development of a series of text!
